

PRESENTATION

by NEW ENERGY PART

A definition of new energy

- As example, there are the solar power, the wind power, biomass power generation, etc.
- Hydraulic power and heat of the earth are not contained in the new energy in Japan.

The necessity for new energy

- cleanness energy
- domestic energy
- area distributed energy
- eternal energy,

New energy needs to be promoted.

Present condition of Japan

- The existing plan , a system, and a propulsion situation are described.
- The realization possibility of trial calculation by the new energy sectional meeting is low.
- There is the necessity of examining a market expansion measure.

Three cases currently examined by the
new energy sectional meeting

Fixed-Price System (Germany
System)

Tender System (England System)

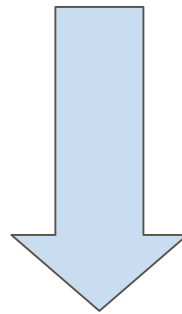

Quota-System + Green
Certificate System

For example : Denmark and Texas

Comparison the Three cases

The Tender System of Britain is useless

- Because there is no adjustment with enfranchisement.
- Britain actually shifts to the green certification system.

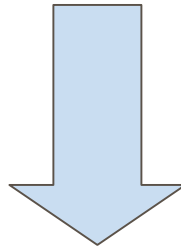

Comparison the Three cases

Comparison between the Fixed-Price System and the Green Certification System

The difference in whether it controls at a price, or it controls in volume.

They are not the policy which is opposed to each other.

Each country should choose a
constitution according to their own
status !!

However,
the new energy committee is going to
introduce the Green Certificate
System .

Reason

- 1: Liberalization of an electric-power market starts completely.
 - 2: This system can secure the amount of introduction of new energy.
- (it was considering that Japan aims at 19,100,000 liter, which will be the target value in 2010.)

Does this green certificate system function truly in Japan?

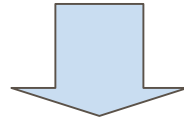

Point

1:How far does **liberalization** of an electric-power market progress?

2:It may become a **seller market**.

3:it is anxious about **the market share** of the Tokyo Electric Power in whether 10% is not exceeded.

In the situation of present of Japan,
it may not function on Green
Certificate System.

**It is necessary to examine with Fixed
price system more.**

(It is possible to introduce from Fixed price
system to Green certificate system
gradually.
